

Technical Advisory Committees

What is a Technical Advisory Committee?

In the course of the development and maintenance of training packages, an IRC may, through its Skills Service Organisation (SSO), establish and work through one or more Technical Advisory Committees (TACs).

A TAC may include technical industry experts, industry associations, regulators and training providers, and can assist the IRC by providing technical input to the review and development of training packages.

Expectations in relation to the use of TACs are:

- The establishment of a TAC is not subject to approval by the AISC and may be done on an ad-hoc basis as the need arises
- Support for the operation of a TAC is subject to the SSO funding agreement with the department and the MoU between the IRC and the SSO.

For more information about TACs that may be involved with your IRC contact the relevant [SSO](#).
