

## Cross Sector Industry Example

The example below draws on the ISF from the Sustainability IRC. Skills, Alignment and Uptake would also be populated by the IRC in practice.

### Stage 1. Identify job families / groupings: What are the broad groupings within your industry?

### Stage 2. Articulate the key jobs and training within each job family / grouping

Job family (Group)	Job function	Job role	Skills	Associated training	Alignment between skills and training	Uptake
<b>Competitive Systems and Practices</b>	Lean Manufacturing	Frontline worker	<i>Key skills required of each job role</i>	Certificate II in Competitive Systems and Practices	<i>Extent to which skills align with content of qualification</i>	<i>Extent to which training is used by employers as an entry and progression requirement</i>
		Team Leader		Certificate IV in Competitive Systems and Practices		
		Manager		Diploma in Competitive Systems and Practices		
<b>Other Job Families as identified...</b>						

### Stage 3. Identify qualifications in the Training Package that are not aligned to the above roles.

Qualification	Use within industry	Uptake
